CONTENTS OF VOLUME 23

Number 1

R. S. S. Badwal	1	The application of fractal dimension to temporo-mandibular joint sounds
N. Pradhan, D. Narayana Dutt and S. Satyam	15	A mimetic-based frequency domain technique for automatic generation of EEG reports
T. S. Lim and B. Ho	21	A computer program in QuickBasic for the selection of tests for the identification of *Helicobacter pylori*
T. D. Lagerlund and P. A. Low	29	Mathematical modeling of time-dependent oxygen transport in rat peripheral nerve
C. Blincoe	49	Computer simulation of normal and pathological copper metabolism in man
Dagan Feng and Xinmin Wang	57	A computer simulation study on the effects of input function measurement noise in tracer kinetic modeling with positron emission tomography (PET)
M. A. A. Moussa	69	Bioassay from two parabolas
M. A. A. Moussa	77	Nonparametric estimation of potency ratio for dilution assays
Software Survey Section	I	

Number 2

L. B. Schwartz, C. M. Purut, D. M. Craig, P. K. Smith and R. L. McCann	83	Computer-assisted modeling of blood-flow: theoretical evidence for the existence of optimal flow wave patterns
R. D. Miller and T. J. Witek Jr	95	An algorithm for measurement of expiratory flow rate parameters on the partial expiratory flow-volume curve
C. Guthrie, J. Gregor and M. G. Thomason	105	Constrained Markov networks for automated analysis of G-banded chromosomes
D. A. Johnston, K. S. Tang and S. Zimmerman	115	Band features as classification measures for G-banded chromosome analysis

J. A. Berges and C. Virtanen 131 Expanding the capabilities of laboratory instruments using built-in microprocessors and serial interfaces: adapting an LKB Ultrospec® II UV spectrophotometer for scanning and enzyme kinetic analyses

N. Lynnerup and O. Lynnerup 143 Automatic data acquisition of anthropological measurements

E. D. Schneiderman, S. M. Willis, C. J. Kowalski and T. R. Ten Have 149 Longer-term growth prediction using GAUSS

M. K. Patel and J. P. Waterhouse 155 A FORTRAN program for the statistical analysis of incomplete time series data sets by a method of partition

J. A. Byers 167 Randomization algorithms in BASIC for experimental design

Software Survey Section I

Number 3

E. Ackerman, Zhangqing Zhuo, M. Altmann, D. Kilis, Jih-Jing Yang, S. Seaholm and L. Gatewood 177 Simulation of stochastic micropopulation models—I. The SUMMERS simulation shell

D. Peterson, L. Gatewood, Zhangqing Zhuo, Jih-Jing Yang, S. Seaholm and E. Ackerman 199 Simulation of stochastic micropopulation models—II. VESPERS: epidemiological model implementations for spread of viral infections

D. Kilis, L. Gatewood, Zhangqing Zhuo, G. Hatfield, S. Seaholm and E. Ackerman 215 Simulation of stochastic micropopulation models—III. COGNET: an artificial neural network for visual recognition

T. W. Blackstad, T. Karagülle, M. S. Malmierca and K. K. Osen 227 Computer methods in neuroanatomy: determining mutual orientation of whole neuronal arbors

F. Y. Wu, J. D. Slater, L. S. Honig and R. E. Ramsay 251 A neural network design for event-related potential diagnosis

C. J. Gibson 265 Rapid filtering of large medical images using one-dimensional convolution kernels

Software Survey Section I

Number 4

C. T. A. Evelo and P. E. E. M. van Daele 273 Development of a software package for computer simulations: the use of a sorted event list for reduction of calculation times

R. S. Atlas, H. L. DuPont and J. E. Overall 283 Computer simulation of alternative sampling strategies to estimate risk of infection from *Cryptosporidium*

O. Barnea 295 A blood vessel model based on velocity profiles

Chun Liu and Bao-He Qu 301 MSR—a program for kinetic analysis of enzyme modification data on PC

Å. Wallin 307 Interactive quantitative analysis of medical images on a PC- or workstation-based system

R. D. Throne 317 Detecting ventricular fibrillation using efficient techniques for computing a normalized autocorrelation

W. K. Prusaczyk, I. Jacobs, T. Bowden and T. M. McLellan 327 A computational method for determination of the individual anaerobic threshold

Jun Xu, Runsheng Chen, Lunjiang Ling, Ruqun Shen and Jian Sun 333 Coincident indices of exons and introns

Software Survey Section I

Number 5

E. J. Riff, S. Mitra and M. C. Baker 345 Pediatric fiberoptic video bronchoscopy: the use of computer interfacing

N. K. Ganesan, D. Liu and E. H. Sims 349 Using an integrated software package for clinical data analysis on a microcomputer

A. Skyschally, R. Schulz and G. Heusch 359 CORDAT II: a new program for data acquisition and on-line calculation of hemodynamic and regional myocardial dimension parameters

J. B. A. Habraken, M. J. van Gils and P. J. M. Cluitmans 369 Identification of peak V in brainstem auditory evoked potentials with neural networks

N. Pradhan and D. Narayana Dutt 381 Use of running fractal dimension for the analysis of changing patterns in electroencephalograms

E. Rieger, J. J. Bijl and M. Rieger 389 Two computer programs using logit transformation for the analysis of S-shaped curves

E. D. Schneiderman, S. M. Willis and C. J. Kowalski 399 Clustering on the basis of longitudinal data

B. R. Krause 407 A hardware-independent data acquisition package incorporating a simulation driver and simulation description language

Software Survey Section I

Number 6

L. Kuncheva	417	An aggregation of PRO and CON evidence for medical decision support systems
N. Pradhan and D. Narayana Dutt	425	A nonlinear perspective in understanding the neurodynamics of EEG
O. Barnea and N. Sheffer	443	A computer model for analysis of fluid resuscitation
M. E. Jones	455	An algorithm accounting for plating efficiency in estimating spontaneous mutation rates
D. P. Siderovski and T. W. Mak	463	RAMHA: a PC-based Monte-Carlo simulation of random saturation mutagenesis
Chan F. Lam, Qin Jiang and R. E. Notari	475	An efficient method for computer-aided dosage form design
Th. Rosenblatt, W. Doeler, I. Ruschenburg, M. Droese and D. Harder	483	Application of form features in digital cell analysis of non-Hodgkin's lymphomas
Jian De Z. Chen and Zhiyue Lin	497	Adaptive cancellation of the respiratory artifact in surface recording of small intestinal electrical activity
Guohong Zhou, K. Ezumi and L. W. Stark	511	Efficiency of searchpatterns
M. E. Jones, J. Wheldrake and A. Rogers	525	Luria–Delbrück fluctuation analysis: estimating the Poisson parameter in a compound Poisson distribution
Software Survey Section	I	
Title Page, Volume Contents and Author Index	V
